Integration Testing Report

Electronics Store Inventory Management System (EIMS) · Final local test run

70	0	100%
Tests passed	Tests failed	Pass rate

1. Test execution summary

Item	Recorded result
Test suite	Integration tests
Tests collected	70
Passed	70
Failed	0
Pass rate	100%
Platform	Windows 11 (win32)
Python	3.12.7
pytest	8.3.5
pytest-cov	7.1.0
pytest-html	4.2.0
pytest-metadata	3.1.1
anyio	4.15.1

2. Areas covered

Test module	Tests
Authentication integration	1
Branch management	5
Component image management	7
Purchase order management	13
Reports API and exports	16
Stock movement history	9
Supplier management	7
System availability	10

3. Test coverage details

The executed integration suite exercised authenticated access and role restrictions; branch creation, assignment and uniqueness; component image upload, replacement and validation; purchase order creation, receipt, cancellation and rollback behavior; inventory search, stock classification and CSV/Excel/PDF report exports; stock-in and stock-out operations with movement history and rollback; supplier creation and duplicate validation; and system availability calculations, including scheduled maintenance and unplanned downtime.

4. Result and interpretation

Result: PASS. All 70 tests in the integration suite completed successfully, with no failures reported in the supplied pytest output. This indicates that the tested integration workflows behaved as expected in the recorded local environment.

Scope note: This report documents the 70-test integration run shown in the supplied terminal output. It does not claim that this run represents the entire project test suite, nor does it report code or branch coverage percentages.

5. Execution environment

Operating system: Windows 11 · Python interpreter: project virtual environment (.venv) · Python version: 3.12.7 · pytest version: 8.3.5.

Source: terminal output supplied for the EIMS integration test run. Prepared as a project testing evidence document.
