UNIT TESTING REPORT

Electronics Store Inventory Management System (EIMS) · Team 9 · Execution record

Execution status	Passed	Failed	Skipped	Total
PASS	13	0	0	13

1. Introduction

This report records the unit-test execution performed for the Electronics Store Inventory Management System (EIMS). The purpose of this execution was to check selected dashboard, inventory, reporting, service, and security behaviours using the project's pytest test suite.

2. Test Environment

Item	Recorded environment
Operating system	Windows 11 (platform: win32)
Python	3.12.7
pytest	8.3.5
pytest-html	4.2.0
pluggy	1.7.0
Test execution	Local virtual environment (.venv)

3. Test Execution Scope

The following test modules were executed using pytest. The counts below are based on the 13 test cases shown in the supplied terminal output.

Test module	Test cases	Passed	Failed
tests/unit/test_dashboard.py	1	1	0
tests/unit/test_inventory.py	3	3	0
tests/unit/test_reports.py	1	1	0
tests/test_unit_services.py	4	4	0
tests/test_unit_security.py	4	4	0
TOTAL	**13**	**13**	**0**

4. Test Case Execution Details

ID	Test function	Test area	Result
UT-01	test_dashboard_summary	Dashboard summary behaviour	Passed
UT-02	test_validation	Inventory validation	Passed
UT-03	test_stock_classification	Inventory stock classification	Passed
UT-04	test_unique_sku_generation	Unique SKU generation	Passed
UT-05	test_stock_value	Stock value calculation	Passed

ID	Test function	Test area	Result
UT-06	test_stock_status_in_stock	In-stock status classification	Passed
UT-07	test_stock_status_low_stock_boundary	Low-stock boundary behaviour	Passed
UT-08	test_stock_status_out_of_stock_boundary	Out-of-stock boundary behaviour	Passed
UT-09	test_search_input_trimmed_and_limited	Search input trimming and limiting	Passed
UT-10	test_password_is_hashed_and_verifiable	Password hashing and verification	Passed
UT-11	test_salt_changes_hash	Salt variation in password hashes	Passed
UT-12	test_plaintext_password_is_never_accepted_as_a_stored_hash	Plaintext password rejection as stored hash	Passed
UT-13	test_malformed_password_hashes_are_rejected	Malformed password hash rejection	Passed

5. Execution Summary

All 13 collected tests passed. No failed or skipped tests were reported in this execution. The observed pass rate was 100% (13/13).

6. Warnings and Observations

Pytest reported one DeprecationWarning originating from Starlette's TestClient integration: the anyio.abc.BlockingPortal alias is deprecated and the warning recommends anyio.from_thread.BlockingPortal instead. This warning did not fail the test run.

Scope limitation: This report covers only the five test modules listed in Section 3. It does not claim that the complete project test suite, integration tests, system validation, or code/branch coverage have been executed.

7. Conclusion

The selected unit tests for dashboard, inventory, reports, services, and security completed successfully in the recorded local environment. Based on this execution, the tested behaviours passed. Additional test categories and coverage measurements should be documented in their respective reports.
